

Company Profile

6 October 2026

Our Story

Carbon Equities New Zealand Limited (CENZ) is a response to client demand for investment opportunities in genuine carbon credit generation projects and operations. We source, audit and structure compliance market (eg. ACCU, [NZU](#)) and voluntary carbon market investments for our clients on a full disclosure basis. We operate the world's first [International Registry of High Integrity Carbon Credits](#), a totally clean platform where only genuinely authenticated credits may be listed. Previously discredited schemes or credits are not permitted on the Registry.

Who We Are

Our [Directors](#) and key senior staff have over 35 years' experience in environmental, engineering and forestry consulting experience in Australasia, Asia, Europe and South America. Through our sister companies [GreenXperts Limited](#) and [Green Tick Certification Limited](#), we have access to a worldwide network of over 3,000 sustainability professionals.

We have eight years' experience as carbon brokers with the New Zealand Emissions Trading Scheme and three years with the voluntary carbon market.

Our Vision

Below Zero - science shows that "Carbon Neutral" or "Carbon Zero" political positions are not enough to effectively reduce emissions. In reality, these concepts have no basis in science, as greenhouse gases constantly circulate around the world in a flux between carbon "positive" and carbon "negative" states. Zero is not enough, we must go Below Zero into Carbon Negative or "Climate-Positive" states. The world needs technology and projects that absorb greenhouse gases faster than human society produces them. This is what we do - we provide opportunities for investors to finance truly carbon negative technologies and projects, and for emitters to purchase genuine carbon credits until they can fully decarbonise. **#beautifulair™**

Our Approach

We seek out climate-positive opportunities, and conduct professional audits of claims made using our [CreditQualityRating™](#) systems. Opportunities which pass our audit are included in our [Portfolio](#). We produce an individual profile for each project, with investment type, structure, fees, projected return, sustainability and risk ratings detailed.

Our most powerful tool is the impeccable [International Registry of High Integrity Carbon Credits](#), where emitters can buy properly authenticated carbon credits and other genuine environmental equities. **Clean carbon with High Integrity Trophy (HIT) credits.**

Together with our clients, we can help create a **Below Zero world**, leaving a sustainable and secure inheritance for future generations.
